Fuel Filtration Systems
About Racor

For nearly forty years, there has been one brand of fuel filtration systems that has earned the confidence and respect of engine and equipment builders, owners and operators around the world – Racor. Leading-edge technology and continuous innovation are designed into every system, and genuine Aquabloc® filter elements have set the global standard. In every configuration, at every flow rate and in any operating environment, Racor is the most trusted name in engine protection. Why trust your investment to anything less?

A World of Fuel Challenges

Fuel contamination, either in the form of dirt or water, will find its way into your fuel system however careful you are. With modern engines now injecting fuel at pressures up to 30,000 PSI, and injector tolerance being measured in microns, even a small amount of dirt or water corrosion can start problems. Water or particulates can cause microscopic surface damage that is then focused on by the high-pressure fuel flow, which causes wear that will eventually lead to reduced efficiency and complete breakdown. With this in mind, managing fuel delivery and system cleanliness through proper filtration becomes an absolute imperative for economical engine operation.

For marine applications, please see Racor brochure #7501.
Racor Solutions For Your Future

Racor has quality-certified manufacturing, engineering and distribution in place around the world, so no matter where you are you can rely on Racor to solve tough filtration problems from the refinery to the engine. Over the years, Racor has kept pace with the increasing demands of fuel filtration, from tough engine requirements for ever-finer particle-removal efficiencies and longer life, to the effective processing of ULSD and biodiesel.

The heart of these advances is in Racor’s proprietary engineered filter media families. Our selection of Aquabloc® medias is known worldwide for its combination of high efficiency, long life and unsurpassed water-removal performance, meeting and exceeding the challenges of today’s diesel engine requirements in all markets and environments.

Using Aquabloc® media, Racor Engineering develops innovative solutions to become integral components in complex engine fuel systems designed by the world’s leading OEM engine manufacturers. Racor develops new solutions using ISO, SAE, JIS and other world-recognized testing procedures to conform to any specifications required by our OEM customers. Racor performs on-engine, on-vehicle and laboratory diesel system testing to further the advancement of diesel filtration for today and into the future. All diesel engine users benefit from this ongoing demand for the latest technology in fuel filtration and fuel system designs.

The future of the diesel engine relies on increasingly stringent exhaust emission requirements, while the quality of diesel fuel continues on a worldwide decline. New diesel engines require extraordinary fuel cleanliness and freedom from water contamination to meet these requirements. Ultra low sulfur diesel (ULSD) and the rapidly expanding use of biodiesel pose new filtration challenges due to their tendency to dissolve existing deposits, absorb water, and support the growth of bacteria. Even cold weather operation is compromised by the new fuels, leading to downtime and problems on an increasing frequency.
Cost-Effective Visual Inspection
See-thru collection bowls allow a water-in-fuel condition to be immediately visible. Closed spin-on cans waste expensive fuel and labor because it’s impossible to check for water without actually opening the drain or removing the can from the mounting head.

Environmentally Friendly
Engineered polymer bowls are reusable, impact-resistant and virtually indestructible. When it’s time for service, only the filter element is replaced – the see-thru bowl and drain valve assembly are reused. The long life cycle of the bowl saves money and reduces the environmental impact through disposal of less material. Use metal bowl versions for inspected or commercial vessels.

Easy Upgrades
See-thru bowls provide connection ports for upgrades that enhance engine performance and reliability. Powerful in-bowl heaters can be added to improve operation in colder climates and electronic sensors alert the operator to drain water in the bowl.

Corrosion-Free Construction
Advanced polymer technology means bowls will not deteriorate from water collection, alcohol-blended fuels, exposure to harsh additives or UV light. Unseen water lying in sealed cans causes them to rust and corrode or worse yet, increase in level and pass through.

High quality gaskets and 0-rings for consistent, sure seals.

Die cast aluminum mounting heads with multiple ports make installation as easy as adding options.

Durable hand primer pumps are integrated into mounting heads.

The heart of every Racor filter is the engineered filter media. Aquabloc II® is known around the world for its combination of high efficiency, long life and unsurpassed water-removal performance.

Polymer bowls are virtually indestructible. They won’t discolor from exposure to alcohol, additives or UV light – a see-thru that stays see-thru. A die cast aluminum bowl is available for most models.

Positive seal self-venting drain eliminates leaks and expedites service.

Water sensor and vacuum gauges to signal service are valuable options available for most models.

Water sensor and vacuum gauges to signal service are valuable options available for most models.
**Diesel Spin-On Series**

### 445 - 460 - 490

**A powerful, integral primer pump makes service quick and easy**

The standard equipment primer pump tops the list of extensive options that allow bus fleets, truck fleets, RV owners and others to tailor a filter/separator system specifically to their operating requirements. These options include a choice of a three-micron rating for the Aquabloc® filter element, 200-watt in-bowl resistance heater, water sensor and flow rates up to 120 gph.

---

![Model 460R](image)

**Model 460R**

---

### 645 - 660 - 690

**Maximize engine protection with a low-profile, easy-to-fit filtration system**

With all the features of the 400 Series, the 600 Series offers engine owners an economical system for applications where an integral primer pump is not needed. Flow rates up to 120 gph, in-bowl heater and water sensor are all available options.

**Notes:**

1. Pressure installations are applicable up to the maximum PSI / kPa shown.
2. Models with integral primer pumps are not recommended for gasoline applications.
3. Replacement element micron rating can be specified as “S” for 2 micron, “T” for 10 micron, or “P” for 30 micron.
4. Not for use with gasoline applications.
# Diesel Spin-On Series

## 110A - 120A - 140

**Maximum protection in minimum space**

The 110A is designed for fuel-injected gasoline engines with high working pressures and also can be used on diesel engines. A metal housing is standard. Other models in the 100 Series, the 120A and 140, offer reliable protection for smaller diesel and gasoline engines used in generator sets, pressure washers and other equipment. Their compact size fits tight mounting locations and multiple ports offer installation flexibility.

## 215 - 230 - 245

**Improved for greater versatility**

The 215, 230 and 245 filter/separators come standard with an integral priming pump and a new see-thru contaminant bowl, which can operate in applications up to 30 psi. Another design upgrade is the optional 200-watt in-bowl heater for colder operating conditions. Applications include light-duty and medium-duty trucks and vehicles, construction, agricultural and other diesel-powered equipment.

For marine rated filters, see brochure #7501.

4125 - 6125
3150 - 3250

High flow applications need not suffer with high maintenance... and Racor offers a range of ultra-high capacity, highly efficient fuel filter/water separators that also deliver spin-on convenience. As you’d expect, Aquabloc II media is standard and all units provide flexibility in options to customize and meet specific operating conditions.

The patented P Series diesel fuel conditioning module was developed for installation on any diesel engine fuel injection system. P Series assemblies are available in three sizes and all feature 3/8” NPT fuel ports. This innovative and modular fuel filter/water separator incorporates low-pressure fuel system components into a single package. The P Series Diesel Fuel Conditioning Module is available with a brushless pump. Please contact Racor Division for information on specific applications.

For Vacuum Applications Only.

The Racor 777 Series: Top-Load, High-Capacity, Low Maintenance

Fleet operators can now have fuel filter/water separator systems that come standard with the most preferred features. The 777R assembly is a complete fuel filtration/water separator system. As fuel enters the assembly, it moves through the centrifuge and spins off large solids and water droplets, which are heavier than fuel, and fall to the bottom of the collection bowl. Proprietary Aquabloc II® cartridge elements repel water and remove contaminants from fuel down to 2 micron. Aquabloc® elements are waterproof and effective longer than water-absorbing elements.

The high-grade aluminum components and powdercoat paints mean that corrosion is never a worry.

A durable single bolt mounting bracket doubles resistance to vibration fatigue.

Aquabloc® media sheds water and keeps engines waterproof, rustproof and dirtproof.

300-watt heaters start you in the cold. Thermostats are standard to meet the requirements of today's electronic engines.

Polymer bowl withstands impact and temperature extremes.

Self-venting drain. A single twist makes draining clean, fast and easy.

With an Aquabloc II® replacement element, you get a complete kit with all the seals you need.

Aquabloc II® media is a blend of high-grade cellulose compounded with resins and a special chemical treatment.

Aquabloc II® elements filter harmful tiny particles of dirt and algae from fuel. Aquabloc II® elements are rustproof – with polymer end caps that won't ever corrode.

The First Name In Fuel Filtration Is Also The Most Improved
Every engine runs better with a system that cleans fuel, removes water, heats fuel and senses when it's time for service. The system is the Racor Turbine Series and it's the most complete, most efficient, most reliable high-capacity engine protection you can install. A system that protects your investment in engines and fuel.

For marine rated filters, see brochure #7501.

Primer pump kit shown installed. Order RKP1912 or RKP1924.

End caps are color-coded for easy identification and application – red for 30 micron primary filtration, blue for 10 micron primary or secondary, and brown for 2 micron secondary/final filtration.

Use original Racor filter elements to ensure premium performance.

An integral bail handle makes changeouts easy.

Our toll-free number is shown on the end cap. It puts you in touch with Racor's technical service staff who can answer any availability, application, or service question.

(3) Flow rates shown for two/all filters on-line.
For accurate fuel flow rates consult your engine manual, engine manufacturer’s agent or Racor distributor.

Manifold Units:
• 75000, 759000 and 7510000 double manifolds with shutoff valve.
• 731000 double manifold without shutoff valves.
• 791000 triple manifold with shutoff valves.
• 771000 triple manifold without shutoff valves.
Biodiesel and other biofuels require extra heat, filtration, and vehicle modifications to burn in diesel engines. Racor fuel filters and heaters are uniquely suited for filtering and conditioning biodiesel and biofuels for use in diesel engines.

**Racor Engineering Leadership**
Racor has participated in several biodiesel filtration field tests with major OEMs. Racor is actively participating in industry-wide research and development on biodiesel fuel filtration and water separation challenges. Development of technology to support the use of all biofuels is ongoing at Racor Division.

**Challenges and Solutions**
Biodiesel tends to shorten filter life and most biodiesels have a low “interfacial tension” – meaning water easily disperses and dissolves in the fuel, greatly reducing efficiency for all types of water separators and coalescers. Racor recommends using the largest filter practical for the application to extend filter life and increase efficiency. When specifying a new biodiesel fuel system, de-rate fuel filter flow by 50% and install on the vacuum side of any pumps, where possible.

In cold weather, Racor recommends using at least 200 watts of thermostatically controlled electric heating in the head and/or filter bowl. Pour point suppressants and biocides are also necessary for reliable operation and a coolant heat exchanger is required in extreme cold weather conditions.

Racor’s ultra high quality synthetic rubber compounds perform equally well in biodiesel and standard diesel. Seals subject to biodiesel exposure are generally replaced at the same time as the replacement filter. Racor uses all materials compatible with up to 20% biodiesel blend. Above 20% may require material changes to dynamic seals that are not normally replaced at element change-outs.

**Biodiesel and Biofuel Filtration Specification Considerations**

1. Large primary and secondary filters at 50% of their rated flow.
2. High-quality, corrosion-resistant materials in construction.
3. High-quality, synthetic rubber compounds for seals and hoses.
4. Efficient coolant and/or electric heating.
5. Fuel source with high-efficiency fuel dispensing.

All Racor filter materials and seals are compatible with ultralow sulphur diesel (ULSD) fuel and B2 to B20 Biodiesel. See Racor bulletin #7679.
300RC Series
The 300RC Series Diesel Fuel Filter/Heater/Water Separators are specifically designed to handle today’s tough cold weather and Biodiesel fuel system problems. These units feature a standard high-efficiency coolant heat exchanger to heat incoming fuel.

- High-capacity media – the Racor Aquabloc™ II media allows for excellent contaminant removal and water separation. Available in 2, 10, and 30 micron ratings.
- Highly efficient heaters – utilizing heat from the engine’s coolant, the heat exchanger transfers heat to the fuel quickly and efficiently.
- Highly efficient water coalescing.
- Biodiesel tested rubber seals and gaskets to prevent swelling.

777 Series
777 Series features an internal thermostat to protect electric engine controls from overheating by the fuel heater and regulates fuel temperature automatically; warm fuel in the winter, cool fuel in the summer (thermostat setting: on at 40°F (4°C), off at 61°F (16°C)). This filter also offers temperature-controlled fuel heating with return fuel or engine coolant; thermostat valve open to 95°F (35°C). Other features include a fuel primer port on top of the assembly, an internal check valve that guards against loss of prime; a heavy-duty integrated mounting bracket that is part of its one-piece billet machined body; a clear bottom bowl that allows the operator to check for water and solid contamination at a glance; and a self-venting drain. Optional accessories include a vacuum gauge and a water detection system.

425 & 500 Series
The Racor 424 and 525 Fuel Heater/Water Separators are designed to protect the precision components of medium-duty and heavy-duty diesel engines. The lightweight systems use engine coolant for heating fuel in colder climates, helping to eliminate the need for more expensive, blended fuel. The multi-stage water separation process results in superior water-removal efficiency. The self-cleaning water separator screen does not require maintenance and accumulated water is easily emptied through a self-venting drain valve. The 360° rotating cover allows quick installation in a convenient location. Options include an integral thermostat and 12V or 120V electric preheater.
In-Line Fuel Filtration

From personal watercraft to agricultural equipment, Racor in-line filters are designed to protect fuel pumps, carburetors, injectors and related fuel system components. We offer a complete range of disposable and cleanable in-line prescreen products.

</table>
Today’s alternative fuels – compressed natural gas, liquid natural gas and liquid propane gas – have the same problems that plague diesel and gasoline… contamination that collects during handling, water that condenses in tanks and compressors that leak oil into the fuel stream.

Protecting the fuel injectors and components of an alternative fuel system is vital to efficient vehicle operation. Racor offers the most complete line of fuel filter/coalescers and prefilter/strainers for on-vehicle applications. These filters ensure removal of damaging aerosol contamination as small as 0.3 to 0.6 micron and exceed 95% efficiency, depending on the grade of element specified. Units are available in a range of pressure ratings and are constructed of aluminum, stainless steel or painted steel. The fuel filter/coalescer elements are produced by a patented process of arranging microglass fibers into a tubular form. During operation, fuel is forced through the coalescing media from the inside of the cartridge through the tubular wall to the outside, where the large droplets fall to the bottom of the housing. Oily water emulsion accumulates until drained while the dirt particles remain trapped on the surface of the fibers.

Prefilter/Strainers
Engineered and precisely manufactured to provide superior performance at operating pressures up to 500 psi, the compact, in-line prefilter/strainers are an essential first step in a complete filtration system.

Low Pressure Fuel Filter/Coalescers
Low pressure coalescers are ideal for operating environments up to 500 psi. All aerosol contaminants in the 0.3 to 0.6 micron range are filtered to an efficiency level that exceeds 95%.

High Pressure Fuel Filter/Coalescers
These patented coalescing filters are constructed to withstand operating pressures to 3,600 psi while removing over 95% of aerosols in the 0.3 to 0.6 micron range.

Fuel Dispensing

FBO Filter Assembly
Racor’s new FBO-10 and FBO-14 filter assemblies are designed to meet the toughest hydrocarbon refueling conditions and provide for ease of filter change-outs. The FBO Assembly can flow 25 gpm/95 lpm or up to 75 gpm/230 lpm depending on the model, the elements installed and fuel being filtered.

The assembly features a locking ring collar, which attaches the filter housing to the aluminum die cast filter head with four bolts. The slotted locking ring collar allows maintenance personnel to hand-loosen the four collar bolts, rotate and lower the bowl assembly for element change-outs. With new element installed, simply raise the bowl and rotate into position on the locking ring and hand tighten evenly.

The closure hardware consists of stainless steel nuts, bolts and washers with metal hand knobs for ease of maintenance – one person can easily change the filter element. No wrenches or other special tools are required.

** Varies with fluid and flow rate.

Powdercoated components capable of 150 psi @ 240° F max design pressure.

Steel filter bowl assembly, a manual vent valve and a manual drain valve help provide ease of service – especially significant given the FBO assembly’s wide range of installations, including fuel trucks, fueling cabinets, diesel fuel dispensing systems, fuel docks and fuel systems on large diesel engines.

1 1/2” NPT inlet and outlet.

Element change-out indicator is optional.
High Flow Fuel Vessels & Filters

Versatile RV Series

Racor RV Series filter vessels applications include removing liquid and solid contaminants from diesel fuel, gasoline, kerosene, aviation gas, jet fuel and other lubricating or hydraulic oils. RV vessels utilize proven filter design technology and can be used as a coalescer/seperator, water absorber or clay treatre by changing internal components, flow direction, or by selecting optional filter cartridges when ordering. The vessels are fabricated from carbon steel with an exterior primer coating of Gavlon suede gray and the interior is epoxy coated to meet MIL-C-4556E.

Element choices include a coalescer/seperator, pre-filter, water absorber or clay treatre. Completely dressed factory filter vessels can be specified with differential pressure gauges, water sight glasses, air eliminators, and manual or automatic drains. Wall mount units can be special ordered.

See bulletin #7648 for the full line of high flow filtration products.

Spin-On Protection At The Pump

Racor’s Fuel Dispensing Filters are essential for stationary and overhead tanks and mobile service vehicles, so you can start protecting your investment at the source. With their easy-to-install heads, they remove virtually 100% of the contaminants from diesel fuel. Racor elements feature a super-absorbent, chemically treated media that absorbs 25 times its weight in water, “locking it in” as a barrier against free and emulsified water. There is no bypass valve, which ensures that fuel is completely protected. As the media swells, it significantly reduces the fuel flow rate, signaling a need to replace the element.

Racor offers filter protection down to 25 microns. Flow rates range from 15 to 100 gpm. Element service is clean and easy – there’s no cartridge to replace – just spin-on a new Racor filter element.

Fuel dispensing filters can be used with diesel fuel or gasoline.

Features

- Carbon steel construction; other materials are available.
- 250 psi ASME Code, Section VIII construction, stamped and certified.
- Yellow zinc-plated swing bolt closure.
- Buna-N O-ring cover seal.
- Interior: Epoxy-coated MIL-C4556E.
- Exterior: Prime coated.
- Knife-edge cartridge mounting seals.

Connections

- Inlet and outlet: 2” NPT.
- Main drain and liquid level ports: 1/2 inch
- Vent and pressure relief connection: 3/4” NPT.
- Differential pressure gauge/sample ports: 1/8” NPT.

Filter Funnel

The Racor Filter Funnel (RFF) family is a new heavy-duty, fast-flow, filter-in-a-funnel that separates damaging free water and contaminants from gasoline, diesel, heating oil, and kerosene. The RFF is capable of removing free water and solids down to .005” and allows you to visually inspect the integrity of your fuel supply as you refuel. The RFF is manufactured using industrial grade black electro-conductive polypropylene. Carbon powder is injected into the plastic so that the RFF will conduct static electricity. The grounding capability of the RFF is an important safety feature. Always use proper fuel handling procedures and follow local, state, and federal regulations.
Coolant Heaters
The Racor ECH™ tank-type coolant heaters operate using the thermo-siphon circulation principle. Heated coolant is returned to the engine as colder coolant is drawn into the heater. By utilizing standard alternating current (AC) from the customer-supplied source, they heat and maintain the engine coolant at a pre-determined temperature range. This warm coolant helps keep the engine ready for instant operation. Racor ECH™ tank type coolant heaters are mounted off the engine for long life and increased wattage output.

Note: Not for use as fuel heaters.

Compact Fuel Heater
Plumbed into the fuel upstream from filters, the coolant heater is another compact way to run through the cold. An optional internal thermostatically-controlled valve allows fuel to bypass the heater once it has reached operating temperature. Depending on fuel flow rate, you can get as much as 89°F heat rise. Like its electric partner, there are no moving parts, nothing to rust or corrode.

Why you need a Racor fuel heater.
All diesel fuels (other than #1) contain dissolved waxes. At cold temperatures the wax crystallizes, leading to filter plugging and fuel gelling. These changes greatly reduce fuel flow, adversely affecting the operability of vehicles.

With the increased popularity of biodiesel, and the use of ultra low sulfur diesel (ULSD), there are new cold weather challenges. While proper fuel winterization normally avoids trouble, both biodiesels and ULSD may experience wax crystallization and gelling at higher than expected temperatures and contribute to cold fuel flow problems anyway.

Keeping this in mind, it is more necessary now than ever to design an efficient fuel heating system for all cold weather applications.

Racor offers a number of efficient heaters. Compact coolant and electric heaters install in minutes, yet deliver years of trouble-free service. There is even an in-line heater which actually turns a fuel line into a heated path from tank to filter.

In-Line Fuel Heater
The W8791 in-line diesel fuel heaters incorporate hot engine coolant to heat cold diesel fuel and keep equipment running in the most extreme weather conditions. Since the hot coolant surrounds the fuel, it is heated the entire time it passes through the fuel heater. This heated path is recommended for extended use in cold weather environments and severe conditions. It prevents power loss and stall, and assists starting down to -40°F. The field-proven system allows operators the cost-saving convenience of using #2 diesel fuel all year round. The W8791 is constructed out of steel and requires no maintenance.
Spin-On Series In-Bowl Heaters

Racor equips the Spin-On Series fuel filter/water separators with the option of a 200W resistance heater integrated into the bowl. Placing the heat source just below the element allows for maximum transfer. Racor Spin-On Series In-Bowl heaters are available installed in assembly upon order (consult catalog for part numbers) or as a retrofit kits.

Turbine Series Heater

The Racor Turbine Series comes available with a powerful heater situated directly below the filter element to assist with cold starting. Thermostats are standard to meet the requirements of today’s advanced electronic engines. These heaters begin to work in just a few moments and place minimal demand on the battery. Racor Turbine Series heaters are available installed in assembly upon order (consult catalog for part numbers) or as a retrofit kits.

300 Series In-Head Heater

The in-head 150W heater is a cold weather aid and is thermostatically controlled when power is provided. The heater will automatically turn on if the fuel temperature drops below 45°F (7°C) and will automatically turn off at 75°F (24°C). Heat is supplied directly below the inlet port to melt the wax crystals and allow fuel to efficiently pass through the element. The heater is operated by turning the ignition switch on for a minimum of five minutes prior to starting the engine.

Consult catalog for part numbers.

Thermoline™

In-Fuel-Line Heater

The heavy-duty Thermoline™ Diesel Fuel Heater comes installed inside a new fuel line and literally replaces the fuel line between the tank and the primary filter. It prevents power loss and stall, and assists starting down to -40°F. This heated path is recommended for extended use in cold weather environments and severe conditions.

Thermoline In-Fuel-Line Heater comes factory pre-wired with all hardware, ready for quick installation.

Consult catalog for part numbers.

Nomad Electric Heaters

The Racor Nomad Diesel Fuel Heater is available in 300 and 500 watts and is one of the most compact, most efficient ways to heat fuel on the road today. Installation usually takes about an hour. An optional frame rail mounting bracket eliminates drilling and welding.

Consult catalog for part numbers.
Vacuum Gauge/Compound Gauge/Service Indicator Kits

Vacuum, Compound (vacuum/pressure), and Service Indicator Kits are available to monitor element condition. During normal operation, filter elements slowly become clogged with contaminants, and the restriction (resistance to flow) through the filter increases until the engine loses power and eventually stalls. By installing a vacuum gauge in your fuel system (at the outlet side of the Racor filter), visual monitoring of element condition is possible at a glance. At the first indication of decreased performance, note the dial reading or apply the “red line” decal provided with most kits. This will assist in knowing when to change the filter at the next interval.

A Fuel Service Indicator measures and remembers the highest fuel filter restriction at the maximum fuel flow. As the fuel filter plugs with contaminants, a yellow position indicator moves in the clear window, locking at several points until reaching the red zone. When the red zone is reached, the fuel filter should be changed and the indicator re-set by pressing the top button. Note: Intervals of element changeout may vary depending on fuel cleanliness. See bulletin #7721.

Always keep a spare Racor element on hand. Compound gauges are necessary to avoid gauge damage where there is “head” pressure, such as in overhead fuel tank installations. Liquid-filled (glycerin) gauges are recommended for applications subject to additional vibration.

Note on gauges: Internal pressure changes may result in external fluid leakage or failure of the pointer to return to zero with the engine off. If evident, clean leakage. Some models may be bled of excess internal pressure (and re-zeroed) by removing the top rubber plug momentarily. Make sure the plug is reinstalled properly. Take care not to push the plug into the gauge housing.

Water Detection Modules & Kits

The RK30880 water-in-fuel sensor has electronics built in. Racor Water Detection Kits are available in a wide selection for various installation requirements. Under-dash, in-dash and remote-mount, these solid state units may be used with any Racor fuel filter/water separator and water probe. They are manufactured using the highest quality materials and are all 100% electrically tested.

An electronic detection module analyzes electrical resistance at the water probe and determines if water is present. If so, the detection module operates to indicate water. All units reset automatically after water is removed (unless specified).

Caution: The water probe and detection modules work with 12 or 24 volts, direct current only and should never be wired to other brand modules or household 110 or 220 volts, alternating current.

Monitors

Coolant Monitor

Monitors coolant level instead of temperature while engine is running, so coolant loss is sensed before engine damage occurs.

Oil Monitor

Monitors oil level while engine is running. It senses oil by volume, not pressure, and alerts operator of oil loss before engine damage occurs.

Pre-Trip Monitor

Permits operator to check oil and coolant levels without raising the hood, saving maintenance time. Weatherproof control module features red and green lights to indicate levels. Ensures maximum life and performance from an engine’s oil, coolant, fuel and filter systems.

Racor Solid State Electronic Fuel Sender

Ruggedly reliable, this 100% solid state 12-volt or 24-volt sender, for any petroleum-based product, eliminates the need to continuously replace mechanical senders. For either stand-alone application or integration with Hot STK fuel heater, it fits standard 5-bolt SAE fuel sender holes. Standard units are available for 0-88 ohm and 240-33 ohm gauges and 13” to 30” tanks. Custom sensors are available for different ohm ranges, special applications and other fluids including water.
Vacuum and compound (vacuum/pressure) gauges and related hardware are available to monitor element condition. As the filter element slowly becomes clogged with contaminants, the restriction (resistance to flow) increases. The fuel pump still tries to draw fuel (suction) but because of this restriction, less fuel is delivered to the engine and instead more air is pulled from it (fuel de-gassing). These results can cause the engine to lose power and eventually stall. By installing a vacuum gauge in your fuel system (at the outlet side of the Racor filter), visual monitoring of element condition is possible at a glance. Note the position of the dial, or apply the “red line” decal provided with most kits. This will assist in easy monitoring as filter efficiency begins to decrease when a filter change is necessary.

Note: Intervals of element changeout may vary depending on fuel cleanliness. Always keep a spare Racor element on hand. Compound gauges are recommended for applications where pressure is occasionally present. These conditions are typically a result of “head” pressure which is present in overhead fuel tank installations. Whatever the reason, compound gauges should be used because damage may result if a straight vacuum-only gauge is used.

We’ve Bottled Racor Protection

Racor Additives are performance-enhancing products for all climates and seasons. There are several convenient sizes, including a 16 oz. bottle; 1 and 5 gallon containers; and a 55 gallon drum. The high concentration of active ingredients in Racor additives allows for higher treatment rates. All Racor Fuel Additives are alcohol-free.

<table>
<thead>
<tr>
<th>Fuel and Coolant Additives</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Powershot+™ Diesel Conditioner</strong></td>
</tr>
<tr>
<td>Racor Powershot+™ Diesel Conditioner is recommended for use in all engine applications using #1 and #2 diesel fuels. One 11-ounce bottle treats up to 30 gallon of diesel fuel. With regular use of Racor Powershot+™ Diesel Conditioner, fuel economy is improved, corrosion protection is provided and fuel stability is enhanced during storage.</td>
</tr>
</tbody>
</table>

| **Powershot+™ Gasoline Conditioner** |
| Racor Powershot+™ Gasoline Conditioner is a convenient gasoline additive that cleans while it protects. It can be used in all types of internal combustion systems and gasoline blends. By cleaning the engine’s fuel injectors or carburetor, Racor Powershot+™ Gasoline Conditioner provides better combustion, better fuel economy and lower exhaust emissions. |

| **Diesel Biocide** |
| Racor Diesel Biocide is a multifunctional petroleum distillate fuel additive. It is used to help maintain color stability and clarity; control bacteria, fungi, organic reaction and sludge formation; inhibit corrosion; and disperse existent sludge. EPA Est. No. 072342-CA-001, EPA Reg. No. 1448-17-47099 |

| **Gasoline Conditioner Plus+** |
| Racor Gasoline Conditioner Plus+ is a diluted multi-functional gasoline additive that cleans as it protects. It is designed for secondary treatment applications and can be used with all types of internal combustion systems and gasoline blends. It provides better combustion, better fuel economy and lower exhaust emissions. |

| **Diesel Conditioner Plus+** |
| Racor Diesel Conditioner Plus+ is a multi-functional fuel additive for all season use. Its formulation contains a cetane improver. Its lubricity additives reduce friction and pass the scuffing BOCLE test for lubricity. Corrosion and rust formation are also reduced. |

| **Diesel Performance Plus+** |
| Racor Diesel Performance Plus+ has the same engine protection qualities as the Racor Diesel Conditioner Plus+ and it has five times the cetane improver to deliver optimal engine performance. The added performance comes with improved lubricity and is alcohol free for better fuel system component protections. |

| **Diesel Winter Plus+** |
| Racor Diesel Winter Plus+ is added to middle petroleum distillates such as No. 2 heating oil or diesel fuel to improve their low temperature operability as measured by pour point and cold filter plugging point. Racor Diesel Winter Plus+ prevents the plugging of lines, filter screens, and valves, and allows the fuel to flow freely down to 32°F (0°C). Diesel Winter Plus+ contains a deicer, which can help reduce line freezing. |
Quality Racor Lubrication Products

Racor Oil Products provide the satisfaction and comfort associated with high-quality lubrication products. Our engineered premium synthetic and synthetic blend products were designed with the demands of tighter engine tolerances and performances.

**Synthetic Heavy Duty Engine Oil**

This premium fully synthetic engine oil is crafted with the highest quality synthetic base stocks and additive systems, which provide superior film strength and oxidation resistance as well as exceptional soot and deposit control. High TBN, coupled with superior performance, high viscosity index, premium detergent and dispersant additives, afford engines maximum protection even in the harshest of operating conditions.

Part # ADT 9332, 32 ounces

**Superior Synthetic 2 Cycle Engine Oil**

This superior synthetic 2 cycle oil has been designed to meet the strict requirements associated with 2 cycle engines. The Racor Superior Synthetic 2 Cycle Oil dramatically improves engine performance by utilizing the most advanced synthetic components available. Recommended for use in outboard marine engines, motorcycles, chain saws, lawn mowers, string trimmer, and other applications that require NMMA and TC-W3® certified 2 cycle oils.

Primary (Pre-) Fuel/Water Separator For Vacuum Applications And Final Fuel For Pressure Applications
Fuel is drawn out of the fuel reservoir by the lift pump into and out of the pre-fuel filter/water separator. The fuel is pre-filtered through a 10 to 30 micron rated filter which also removes harmful water, thereby protecting the lift pump and injection system. The lift pump pressurizes the pre-filtered fuel into the final filter. Fuel is then filtered by a 1 to 7 micron rated filter, ensuring purified fuel is delivered. The combination filtration system design provides superior protection for heavy-duty applications where high levels of contamination and high volumes of fuel require a high filter capacity. Fuel conditioning options (drain, water sensor, hand primer pump, heater, etc.) are usually installed in the primary assembly. Racor’s P-Series (page 9) integrates the primary pre-filter and a lift pump into one package.

Secondary (Final) Fuel Filter/Water Separators For Vacuum Applications
This design integrates the primary fuel filter/water separator and final fuel filter into one system that is installed prior to the lift pump. The single assembly provides total filtration (4 to 7 microns) and water separation for the entire fuel system. This filtration system design provides excellent protection for applications where cost and service constraints are a challenge. Sufficient space for an adequate size combination unit must be available.

Secondary (Final) Fuel Filter/Water Separators For Pressure Applications
This design integrates the primary fuel filter/water separator and final fuel filter into one compact system that is installed after the lift pump. Generally, an in-fuel reservoir filter screen (100 to 200 micron) is utilized to complete the filtration system. The final fuel filter/water separator is installed after the lift pump and provides protection (4 to 7 microns) to the high pressure injection system. This filtration system design provides economical fuel injection system protection for small diesel engines, automotive and light-truck applications that already have generally good fuel quality and a relatively low volume of fuel usage.

Heavy-Duty Air Cleaners & Replacement Elements
Racor has expanded its air filtration family of products to include Heavy-Duty Air Cleaners and replacement air filter elements (formerly Farr Transportation Products Group). These high-capacity, efficient and flexible products expand the breadth of line that Racor customers have grown to expect.

Brochure number #7567.

Heavy-Duty Combination Air Filters & Pre-Cleaners
Racor Combination Air Filters and Pre-Cleaners are designed to be connected to the air intake or to replace the existing standard air cleaner on diesel and gasoline engines. There is a wide range of centrifugal pre-cleaners and combination air filter/centrifugal pre-cleaners for agricultural machinery; earth-moving equipment; stationary engines; generator sets; trucks, buses and recreational vehicles; material handling equipment; snow removal equipment; and street sweepers.

Brochure numbers #7555, 7558, 7559, 7560, 7561 and 7562.

Marine Air Filter/Silencers & Crankcase Ventilation Filtration Systems
Racor Marine Air Filter/Silencers and Crankcase Ventilation Filtration Systems help to keep marine engines and engine rooms contaminant and vapor free. The patented CCV™ contains Racor’s high-performance Vaporbloctx™ filter made with depth-loading, engineered fiber-coalescing media. The marine air filter/silencer contains a washable media and is designed to connect easily to the Racor CCV to complete the system.

Brochure numbers #7496 and 7501.

Marine Air Replacement Filters
Racor now offers replacement filters for marine applications. These filters are direct replacements for the intake air filter portion of various brands of air filters/silencers.

Brochure number #7501.

ParFit™ Hydraulic Elements
The competitively priced ParFit™ hydraulic elements are interchangeable with OEM and aftermarket elements to allow users to acquire all their replacement elements from one quality source.

Brochure number #7729.

Bypass Oil Filtration Systems
Removes dirt, varnish, ash, tar, soot and other contaminants along with condensed water which forms damaging acids if left in the oil.

Bypass Oil LFS
Brochure number #7460.
Parker’s Product Information Center

Parker Hannifin has become a world leader in motion and control technology by providing premier customer service. That’s what our Product Information Center is all about. Our experienced agents are ready to provide you with the product indentification and referral service you need. Emergency breakdown calls are relayed via pager to agents on call who will respond promptly. Non-emergency calls are recorded and answered the next business day.

Tap Into the Knowledge Network

Every agent has access to extensive computer databases referenced by part number and product category. Information encompassing 200 worldwide facilities, 400 product lines, and 1,200 market segments is at their fingertips. Our goal is to make it as easy as possible for you to do business with Parker.

Language Line Service

By using the Language Line Service, we can access interpreters for more than 140 languages immediately. Handling non-English-speaking inquiries is not a problem!

About Parker Hannifin Corporation

Parker’s Charter
To be the world’s leading diversified manufacturer of motion control technologies and systems, providing precision-engineered solutions for a wide variety of commercial, mobile, industrial and aerospace markets.

Corporate Profile
With annual sales exceeding $8 billion, Parker Hannifin Corporation is the world’s leading diversified manufacturer of motion and control technologies, providing systematic, precision-engineered solutions for a wide variety of commercial, mobile, industrial and aerospace markets. The company’s products are vital to virtually everything that moves or requires control, including the manufacture and processing of raw materials, durable goods, infrastructure development and all forms of transport. Traded on the New York Stock Exchange under the symbol “PH,” Parker is strategically diversified, value-driven and well positioned for global growth as the industry consolidator and supplier of choice. The company has increased its annual dividends paid to shareholders for forty-nine consecutive years, among the top five longest-running dividend-increase records in the S&P 500 Index. For more information, visit the company’s web site at http://www.parker.com, or its investor information site at http://www.phstock.com.

Aerospace Group
A leader in the development, design, manufacture and service of control systems and components for aerospace and related high technology markets, achieving profitable growth through premier customer service.

Automation Group
A leading supplier of pneumatic and electro-mechanical components and systems to automation customers worldwide.

Climate & Industrial Controls Group
Designs, manufactures and markets system-control and fluid-handling components and systems to refrigeration, air-conditioning and industrial customers worldwide.

Filtration Group
Designs, manufactures and markets quality filtration and clarification products, providing customers with the best value, quality, technical support and global availability.

Fluid Connectors Group
Designs, manufactures and markets rigid and flexible connectors and associated products used in pneumatic and fluid systems.

Hydraulics Group
Designs, produces and markets a full spectrum of hydraulic components and systems to builders and users of industrial and mobile machinery and equipment.

Instrumentation Group
A global leader in the design, manufacture and distribution of high-quality critical flow components for worldwide process instrumentation, ultra-high-purity, medical and analytical applications.

Seal Group
Designs, manufactures and distributes industrial and commercial sealing devices and related products by providing superior quality and total customer satisfaction.
