Beginning May 2010, all Par Fit™ primary fuel filters used in Ford 6.0L and 6.4L engines will be produced using a newly designed end cap with O-ring.

Fuel filters used on Ford 6.4 and 6.0 engines now have an improved fuel filter seal design. This new design insures that high differential pressure due to poor quality fuel or new biodiesel blends will not compromise the filter performance. The new element design is an improvement. Both the old and new style filters are functional and approved for use by Ford Motor Company.

Par Fit™ filters affected by this change include PF F4604 (obsolete) superseded by PFF4616 for Ford 6.0L and PFF5550 (obsolete) superseded by PFF4617 for Ford 6.4L Powerstroke diesel engines.

All filters meet or exceed OEM specifications.
